A New Lighting Experience

- 90 years of experience
- VS stands for quality and innovation
- Sophisticated technologies from Germany
- VS HID products, "Made in Germany"
- Perfectly matched VS systems
- Three- to five-year VS product warranty
- VS protection against product piracy
- Competent global network

VS Quality

Your Decisive Advantage

Quality equals Product Value

Customer-orientated quality awareness involves manufacturing products that fully satisfy the requirements each component is expected to meet. Vossloh-Schwabe has more than 90 years of experience in developing and producing components for lighting technology. The product range includes lampholders, ignitors, ballasts, transformers, capacitors, LED components and VS' automated luminaire wiring systems (ALF).

As a member of the global Panasonic Group, Vossloh-Schwabe is headquartered in Urbach, Baden-Württemberg, in Germany. Our innovative components for lighting technology have made us a technology leader and kept us on a path of continuous company growth. VS' renowned product quality and efficiency have been the bedrock of our success.

VS Quality spells Competitive Advantage

Fitting luminaires with VS products brings the decisive advantage of VS' brand values, namely quality and innovation, plus the assurance that our products are all built on sophisticated technologies from Germany. Furthermore, our close cooperation with standardisation committees guarantees our product developments remain fully future-compliant.

In its capacity as a systems provider, Vossloh-Schwabe provides a complementary product range made exclusively of top-quality materials. Moreover, by documenting each step of the entire production process, we ensure a consistently high quality standard, which is also mirrored in the three-year warranty VS extends on all products. If you have your lighting project registered at VS, you can even extend this warranty period to five years.

In addition, a counterfeit-proofing system was developed to ensure you always benefit from the advantages of authentic VS products. For instance, VS ballasts for discharge lamps are fitted with a microchip that documents product authenticity. VS ignitors used with discharge lamps are also guaranteed to be manufactured in Germany and for that reason all bear a special, laser-printed mark. As product piracy jeopardises both your safety and the safety of your customers, VS attaches great importance to protecting the integrity of VS' product quality.

Worldwide Presence permits Trusting Cooperation

As a company with international operations, Vossloh-Schwabe maintains more than 25 locations around the world. In addition, VS works with authorised distribution partners in those countries with no VS sales offices.

This global approach ensures we can provide a competent VS partner to answer all your light technology questions. Vossloh-Schwabe: traditionally innovative.
